

Paediatric Physiotherapy

Paediatric Physiotherapy provides treatment, management and education to enhance the participation of children 0–18 years of age.

Paediatric physiotherapists see a wide range of conditions in the areas of musculoskeletal, neurological/developmental, and cardiorespiratory health.

Paediatric Physiotherapy may assist your child if they are experiencing:

- A delay in achieving physical milestones e.g. rolling, sitting, walking, etc.
- A flat spot on the head or prefers to look to one side only (known as Plagiocephaly/Torticollis)
- Talipes or if you are concerned about the position of your baby's feet
- Clumsiness with running, jumping, ball skills etc.
- Unusual walking pattern or posture
- Prematurity – if your baby was born before 35 weeks gestation
- Pain or aches with activity or rest.

A referral can be made through your local GP, Maternal & Child Health Nurse, Paediatrician or by simply calling us on
(03) 9744 4455
